EDUCATION

Polytechnic University of the Philippines - Manila

Sta. Mesa, Manila

Bachelor of Science in Computer Science.

Cumulative GWA: 1.21 / 1.00

DOST-SEI Undergraduate Scholar

2024-Present

Relevant Coursework: Design and Analysis of Algorithms, Data Structures & Algorithms, Information Management, Object-Oriented Programming, Differential Calculus, Linear Algebra, Statistics

Central Luzon State University Science High School

Science City of Muñoz, Nueva Ecija

STEM Strand: Graduated with **Honors**

2024

Accomplishments: Best Thesis in Applied Science Category Award, Published Research Paper

EXPERIENCES

FlyRank.ai Internship

July 2026 - Present

Backend AI Engineer Intern

- Developed a true RESTful API backend with a Supabase database (PostgreSQL) using Python's FastAPI framework which serves a CRUD Next.js frontend framework.
- Containerized backend and frontend projects using Docker and implemented various authentication methods using Supabase Auth.

START-a-Ton National Hackathon 2026

Second Place

Team Lead and System Architect

April 2026

- Designed and co-developed STAR S.H.I.P. (SMS Hub for Information Processing), an AI-powered system with a true offline data-ingestion pipeline using FastAPI, and httpSMS API and webhook to ingest SMS payloads, applying data preprocessing techniques.
- Directed the system architecture and pitched the final product, leading the development team to win **1st Runner-Up (2nd Place)** out of a competitive national pool organized by *START-DOST*.

SIKAPTala: National CS & IT Competition

Sixth Place

Team Lead and Project Manager

May 2026

- Co-designed an AI-driven decision-support engine utilizing NVIDIA Nim's gemma-4-31b-it API to dynamically process user decisions and mitigate decision fatigue.
- Placed **sixth out of over 70 hackathon teams** who represented different universities from all around the country. The event was a national competition with a hackathon category, organized by *De La Salle University - Dasmariñas*.

PROJECTS

IskoolarShip: A Scholarship Match-Finding Android App

Full Stack Developer

- Engineered "Iskoolarship," a comprehensive full-stack application using the Expo framework to assist students in finding scholarship opportunities.
- Designed and implemented both the user-facing client interface and a stateful database management system and deployed it to Supabase to cater real-world users.
- Implemented Optimized Recommendation System User Interface using Greedy Weighted Algorithm and 0/1 Knapsack

SKILLS & INTERESTS

Languages: Python, JavaScript, Typescript, C, Java, SQL, HTML, CSS, PostgreSQL, SQLite

Frameworks and Tools:

AI/ML: Scikit-Learn, PyTorch, fast.ai, Jupyter Lab, Kaggle, Google Colab, Pandas, NumPy

Software Engineering: Next.js, React.js, React Native (Expo), Express.js, Tailwind

Development: Docker, Claude Code, Git, Github, Bash, VS Code, PyCharm, Antigravity, Supabase

Interests: Machine Learning Specialization (Ng), Hands-On Machine Learning with Scikit-Learn and PyTorch (Geron), Designing Data-Intensive Applications (Kleppman), Understanding Deep Learning (Prince)
